

QCItemAnchor::~~QCItemAnchor

QCItemPosition::~~QCItem  
Position

QCItemPosition::parentAnchorX

```
graph LR; A[QCItemAnchor::~~QCItemAnchor] --> C[QCItemPosition::parentAnchorX]; B[QCItemPosition::~~QCItemPosition] --> C;
```

The diagram illustrates a memory management or pointer assignment scenario. On the left, there are two boxes representing destructors: 'QCItemAnchor::~~QCItemAnchor' (top) and 'QCItemPosition::~~QCItemPosition' (bottom). On the right, there is a shaded box representing a variable 'QCItemPosition::parentAnchorX'. Two blue arrows point from the right side of each destructor box to the left side of the shaded box, indicating that both destructors are associated with or point to this specific variable.
