

QCPIItemText::anchorPixel  
Position

QCPIItemText::draw

QCPIItemText::selectTest

QCPIItemText::getTextDraw  
Point

```
graph LR; A[QCPIItemText::anchorPixel Position] --> D[QCPIItemText::getTextDraw Point]; B[QCPIItemText::draw] --> D; C[QCPIItemText::selectTest] --> D;
```

The diagram illustrates a relationship between four methods of the QCPIItemText class. On the left, three methods are listed in white boxes: QCPIItemText::anchorPixel Position, QCPIItemText::draw, and QCPIItemText::selectTest. On the right, a single method is listed in a gray box: QCPIItemText::getTextDraw Point. Three blue arrows point from each of the three methods on the left to the method on the right, indicating that these three methods likely call or depend on the getTextDraw Point method.
